

# OEM Integration Made Simple

Subaru Motor Corporation and Autosoft DMS

Subaru

Integrations between Subaru and Autosoft's DMS **help dealers reduce errors and improve overall efficiency.**

## Accounting Integrations

»» **Financial Statements:** Pull data from your general ledger to prepare and print the standard Subaru Financial Statement. Transmit your monthly financial statement from your DMS to Subarunet.com.

## Parts Integrations

»» **Parts Orders:** Generate parts purchase orders as usual in your DMS and download them to Subaru through Subarunet.com. This process allows you to easily stock your parts inventory.

»» **Parts Returns:** Manage unused and obsolete parts by generating parts returns in your DMS and submitting them to Subaru through Subarunet.com.

»» **Inventory Update:** Update your inventory to Subaru PartsEye and send either a daily or history file directly to Subaru. The daily file includes current inventory and current month-to-date and lost sales for each part. The history file includes the same data, as well as the sales history for the previous 12 months, excluding the current month. The information is used by PartsEye to suggest future stock orders and optimize parts inventory.

»» **Parts Order Import:** Download parts orders to your DMS from Subaru PartsEye. The interface will operate using your generated list, giving you the option to roll your order queue into your parts order once it has been imported.

»» **Subaru Parts Catalog:** Autosoft DMS integrates with the Subaru Parts Catalog so you can import parts from the Subaru Electronic Parts Catalog into the Parts Queries screen in the Parts application. From there, you can add the parts to a counter slip, repair order, parts order, or quote.

## Service Integrations

»» **Subaru Warranty Repairs:** Generate and close a service repair for a Subaru warranty claim as usual in your DMS and use the Subaru Warranty menu to review and/or edit repair, labor, and parts information, as well as pricing. Claims can be downloaded and submitted to Subarunet.com. The Claims History function allows you to review a list of ROs downloaded to Subaru and reactivate files for download again.

“ This integration between Subaru and its dealers is part of our continued commitment to bring innovative technologies to market that help our customers work more effectively. ”

– Bryce Veon, President & CEO, Autosoft
